

## Tronox Titanium Dioxide

### California Proposition 65

The State of California has included titanium dioxide on the list of chemicals known to cause cancer but only with reference to airborne, unbound particles of respirable size in terms of the Safe Drinking Water and Toxic Enforcement Act of 1986 ("**Proposition 65**").

Titanium dioxide used in applications such as paint, plastics, and paper are typically fully encapsulated within a solid or liquid matrix and is accordingly, non-respirable. As a result, such applications would not require warning statements as they do not meet the listing requirements.

For more information on required warning statements go to the following website:  
<https://www.p65warnings.ca.gov/>

Information provided in this document is intended to assist our customers in determining the appropriateness of warning statements on their products under Proposition 65. However, final determination is the responsibility of our customer based on their knowledge of how their product may be used.
