

Tronox Titanium Dioxide

Allergens

Tronox titanium dioxide is a synthetic or manufactured product made by purifying and concentrating a naturally occurring titanium dioxide bearing ore. Raw materials containing allergens such as milk or milk products, peanut products, tree nuts, grains, fish or seafood, seeds or seed products, shellfish, gluten and latex are not used in the manufacture of Tronox titanium dioxide pigment.

While Tronox does not test for these substances in the final product, based on best knowledge of our manufacturing process, we cannot foresee any means in which these allergens might be present in the finished titanium dioxide product.
