

Tronox Titanium Dioxide

Biocide- Fungicide- Preservatives

Tronox titanium dioxide is a synthetic or manufactured product made by purifying and concentrating a naturally occurring titanium dioxide bearing ore. Tronox titanium dioxide is a white pigment offered in dry powder and liquid slurry form.

Tronox does not add biocides, fungicides, synthetic fungicides, preservatives, or fumigant pesticides in the manufacture of our dry titanium dioxide pigment products. While Tronox does not specifically test for these substances, based on the best knowledge of our manufacturing process, we cannot conceive of any potential route in which they might be present in the finished dry pigment products.

However, Tronox titanium dioxide slurry products do contain a proprietary biocide package to inhibit microorganism growth in these aqueous formulations. With that said, Tronox slurry processes are segregated from pigment manufacturing processes with no potential for cross contamination.
