

Description: CristalACTiV™ G2 is a high surface area ultrafine TiO₂ powder with calcium sulfate suitable for use in Claus catalysis or applications requiring numerous active sites.

Applications: CristalACTiV™ G2 is recommended for evaluation in:

- Claus catalysis
- Water treatment

Typical Properties: This document does not constitute a specification. Product specifications are available upon request.

- | | |
|--|------------------------|
| • Crystal form: | Anatase |
| • TiO ₂ content (ignited base): | ~90 wt% |
| • Surface area: | ≥300 m ² /g |

Regulatory Status: CristalACTiV™ G2 has a wide range of regulatory approvals for various applications worldwide. Please see www.tronox.com or contact your Tronox sales representative for additional information. Regulatory information requests may also be submitted at chemprodsteward@tronox.com.
