

One of our six core values at Tronox is:

**Responsibility: We care for our environment and our communities.** We are responsible citizens, as a company and as individuals. We are stewards of our environment and active in our communities.

Tronox embraces its responsibility to protect the environment as a core value to our commitment to business sustainability. We operate in accordance with all applicable laws and regulations, including reporting requirements, and we apply responsible standards where environmental laws and regulations do not exist.

As part of the company's commitment to environmental stewardship, it is company policy to:

- Comply with all environmental laws and regulations.
- Respond quickly and effectively to environmental incidents in cooperation with local response services and authorities, and appropriate government agencies.
- Promptly report environmental incidents and performance to responsible company personnel and appropriate government and regulatory agencies.
- Manage and operate efficiently while striving to reduce emissions and waste, and use energy and natural resources efficiently as we grow.
- Emphasize the importance of individual support and personal accountability for the company's environmental performance and establish appropriate operating practices and training programs.
- Review and evaluate the environmental performance of company operations and actively seek opportunities for continuous improvement.
- Incorporate and evaluate environmental considerations in the development of new capital projects and as part of any merger and acquisition activity.
- Promote concern and respect for the environment among employees, business partners, contractors, suppliers, customers, neighbors and shareholders. Communicate responsibly with those stakeholders on environmental matters.
- Require contractors to act responsibly and in accordance with the company's standards and applicable environmental laws and regulations.

This policy is implemented through management and employee engagement, allocation of sufficient human and capital resources, and rigorous measurement, review and correction action management systems. Advancing this policy is an integral part of our business conduct.
