

Tronox Australia Environment Policy

Tronox is a fully integrated mining, minerals processing and titanium dioxide pigment manufacturing organisation that supplies a range of products to customers domestically and overseas.

Tronox management accept that all Tronox employees, all associated contractors and visitors, our customers, suppliers and the communities in which we operate, have a right to expect prudent, responsible and environmentally sustainable performance from us.

To meet this expectation, Tronox will:

- As a minimum, comply with all statutory environmental requirements and company policies;
- Implement programs to avoid causing environmental harm, conserve natural resources, reduce waste, reduce any controllable contribution to human induced climate change and promote the efficient use of energy and water;
- Establish environmental targets as part of the Tronox Business Plan and endeavour that each operational site prepares a complementary action plan;
- Develop, educate and endeavour to ensure all employees and contractors understand and are accountable for their role in achieving environmental targets;
- Maintain Environmental Standards, including systems to investigate and analyse environmental incidents and measure our performance in meeting the intent of this policy;
- Monitor and evaluate the environmental performance of company operations and actively pursue opportunities for improvements;
- Aim to provide adequate resources and training as part of the Tronox Business Plan to implement the systems required to maintain and improve environmental performance; and
- Provide environmental leadership through open and effective communication with all stakeholders and by sharing environmental expertise.
